

THE INVENTION CLAIMED IS:

1. A drinking container comprising:
a shell having an outer surface, an inner surface, a top portion, and a base, wherein the shell is transparent;
a sleeve having an open end, wherein the sleeve is fitted inside the shell and the sleeve is reflective; and
a design formed on the inner surface of the shell.
2. The drinking container of claim 1, wherein the shell is acrylic.
3. The drinking container of claim 1, wherein the sleeve is metallic.
4. The drinking container of claim 1, wherein the shell is acrylic and the sleeve is metallic.
5. The drinking container of claim 1, wherein the shape of the shell and the shape of the sleeve is substantially cylindrical.
6. The drinking container of claim 1, wherein the outer surface of the shell is smooth.
7. The drinking container of claim 1, wherein the design is one of a plurality of optic panels, a figure, a pattern, and an ornamental shape.
8. The drinking container of claim 1, wherein the plurality of optic panels extend on the inner surface of the shell from the top portion of the shell toward the base of the shell.
9. The drinking container of claim 1, wherein the open end of the sleeve includes a lip forming a circumferential groove facing downward.
10. The drinking container of claim 1, wherein the top portion of the shell includes a circumferential ledge for receiving the circumferential groove of the sleeve.

11. The drinking container of claim 1, further comprising a connection means for securing the sleeve to the shell.

12. The drinking container of claim 11, wherein the connection means comprises:

- a threaded connection on the sleeve;
- a hole in the base of the shell; and
- a screw inserted through the hole and screwed into the threaded connection.

13. The drinking container of claim 1, further comprising a handle attached to the outer surface of the shell.

14. The drinking container of claim 13, further comprising a protruding section, wherein the protruding section accommodates the handle.

15. The drinking container of claim 1, further comprising a lid.

16. The drinking container of claim 15, wherein the lid covers the open end of the sleeve.

17. The drinking container of claim 16, wherein the lid includes a means for accessing the liquid within the sleeve.

18. The drinking container of claim 1, wherein an insulating pad is affixed to the base of the shell.

19. A drinking container comprising:
a shell having an outer surface, an inner surface, a top portion, and a base, wherein the shell is transparent;
a sleeve having an outer surface and an open end, wherein the sleeve is fitted inside the shell and the sleeve is reflective; and
a design formed on the outer surface of the sleeve.

20. The drinking container of claim 1, wherein the shell is acrylic and the sleeve is metallic.
